SUMMARY

Software engineer and 2-time entrepreneur with **10 years of experience** delivering backend, web and Android products across messaging, real-money gaming, payments and matchmaking. Developed distributed services with **Go, Python, JS** using Kafka, gRPC, PostgreSQL, Redis and Firestore, and operated cloud infrastructure on **Kubernetes, AWS and GCP**. Maintained messaging services handling billions of daily API requests, with a focus on performance, reliability, automation and integration testing. Designed infrastructure that **saved $500K annually** at MPL; co-founded Cloudfeather Games, helped raise **$1.25M at a $5M valuation**, and led 5 engineers. Contributed to open-source projects including Bitcask, Sentry and Grafana, and built AI applications using Ollama, Whisper and MLX.

PROFESSIONAL EXPERIENCE

Software Engineer L4 - In-app Messaging

Customer.io Dec 2025 - Present

- Maintained **Go and .NET services on GKE handling billions of daily API requests**; contributed to the migration from .NET to Go.
- Optimised Go SSE delivery: **58 to 2,114 events/second (~36x)** and **3 to 1 Firestore fetches/event** in a local benchmark (96 events x 3 aliases; 5 ms simulated Firestore latency).
- Reduced in-app editor memory usage by **approximately 100 MB per load** through Framecast and Sentry for Ember optimisations.
- Worked on hosted in-app form pages and embed scripts using Temporal, GCS and a CDN for multi-tenant architecture, and platform support for thousands of live activities per second on Android and iOS.
- Built **Playwright E2E testing** with SRE, scheduled through GitHub Actions with Prometheus Pushgateway metrics and Slack reporting.
- Built a MySQL query UI supporting **bastion/jump hosts and US/EU databases**; added plugin support to local service tooling and expanded shared testing utilities.
- Shared engineering work and Claude plugins for day-to-day automation through company-wide demos.

Co-founder & CTO

Cloudfeather Games (acquired by MPL) Oct 2021 - Oct 2025

- Built a custom **Kubernetes game-server orchestrator, proxy and autoscaler** for millions of users, reducing infrastructure costs by **$500K annually** while improving stability at MPL.
- Built **3 card-game backends processing 50K+ games/day**, with matchmaking, automatic recovery and game garbage collection.
- Integrated **10+ gaming platforms** for authentication, payments and settlements; built supporting payment, settlement and profile modules handling **100K+ monthly transactions**.
- Led **5 engineers** across backend, Android, web and Unity; helped raise **$1.25M at a $5M valuation** and led acquisition technical due diligence.
- Led 4 developers delivering **MPL Poker in 5 formats** (NLH, PLO 4/5/6 and Rapid) for millions of monthly users; partnered with product/design and ran 3 feedback demos.
- Automated **Grafana dashboards and alerts** with its SDK; operated Dockerised Jenkins, OpenVPN, Superset, Prometheus and Grafana.
- Built a mobile score-extraction pipeline for Bountyverse using **TensorFlow Lite, Keras and mean squared error**; integrated creation/hunt activities with Discord.
- Automated daily analytics reporting for **1,000+ users** with CleverTap and Google Sheets; explored HTTP/3 image delivery and ComfyUI-based generative AI for Slark, an in-game reskinning tool.

Software Engineer 3 - Risk & Settlement

Grab Aug 2019 - Oct 2021

- Built a settlement pipeline enabling **instant payouts for 1,000+ merchants**; replaced cron jobs with a Go/Kafka delay queue that processed **100K+ settlements in 15 minutes** in its 1st production run.
- Integrated fraud detection with Maybank and added rule operators, **improving detection by 3%**; enhanced a React AML dashboard analysing **100K+ daily transactions**.
- Built a **Docker-in-Docker integration test framework** for Go, Redis, PostgreSQL, Aerospike and Kafka; contributed code-coverage and structured-logging tools.

Software Development Engineer - Core Matchmaking

UrbanClap Dec 2018 - Jul 2019

- Built reverse matchmaking for thousands of providers and greedy scheduling/job-assignment algorithms handling **500+ daily requests and 50+ providers**; created a React dashboard for virtual-number allocation.

Software Development Engineer - Samsung DeX

Samsung Electronics Jun 2017 - Dec 2018

- Built a **secondary taskbar for dual-screen DeX** and Smart View On Display for idle-state notifications/time; reduced Android build time by **30%** with a build queue for 6 engineers.

Founding Member

Infistart LLP Jul 2015 - Apr 2017

- Built a **Python/Django coaching-management backend for 30K+ students**, covering enrolments, fees, real-time updates and data synchronisation.
- Developed an **OMR grading tool processing 50 scans/minute**; built food-ordering websites, an Android app and e-commerce websites for college entrepreneurs.

Software Development Intern

Flipkart May 2016 - Jul 2016

- Contributed to the backend of an internal security dashboard used by **1,600 engineers** for compliance and system monitoring.

TECHNICAL SKILLS

Languages & frameworks: Go (Golang), Python, JavaScript, Django, React; Android development

Backend & systems: Distributed systems, HTTP APIs, gRPC, event-driven processing, SSE, Temporal, Kafka, payments, settlements, matchmaking

Databases & storage: PostgreSQL, MySQL, TimescaleDB, DynamoDB, Redis, Aerospike, Firestore, GCS

Cloud & infrastructure: AWS, GCP, Kubernetes, Docker, Terraform, autoscaling, infrastructure optimisation and automation, Jenkins, GitHub Actions

Reliability & testing: Prometheus, Grafana, Sentry, benchmarking, structured logging, integration testing, Playwright E2E testing

AI & applications: TensorFlow Lite, Keras, MLX, Ollama, Whisper, ComfyUI, generative AI, AI-assisted development

Leadership & collaboration: Technical leadership, mentorship, product/design partnership, project planning, communication, problem solving, OKR-driven delivery

OPEN-SOURCE CONTRIBUTIONS

- **Bitcask**: Fixed a **recursive read-lock deadlock** by refactoring merge logic; added TTL keys, on-demand garbage collection and reclaimed-space reporting.
- **Sentry JavaScript**: Fixed a memory leak retaining **approximately 34 MB** after page navigation.
- **PayPal Go SDK**: Fixed duplicate order requests when reusing the same request ID.
- **NutsDB**: Fixed a merge-time garbage collection issue caused by repeated key insertions.
- **Grafana**: Fixed stale dashboard views persisting after dashboard replacement.
- **RedisInsight**: Resolved a theme-handling issue that displayed incorrect colour schemes.
- **ComfyUI-3D-Pack**: Added .glb model animation support and image/GIF downloads from the UI.
- **AnythingLLM**: Improved maintainability through code cleanup and targeted refactoring.

KEY PROJECTS

- **SAS - Serve and Sync**: Built HTTP folder mirroring between machines with a browser UI using only the **Python standard library**, without SSH, rsync or third-party dependencies.
- **Dear Diary**: Built a voice-based AI diary using Whisper transcription and Ollama, with a serverless application architecture on **AWS Lambda and DynamoDB**.
- **Upscayl CLI**: Built a command-line tool for AI-powered image upscaling without a graphical interface.
- **AI Video Generation Pipeline**: Automated topic-to-video creation with Ollama for scripts, Kokoro TTS for narration, Flux models with MLX for imagery, and **FFmpeg** for assembly.
- **Xamine**: Built an AI-powered personalised question-paper tool for competitive exams using **Mistral vision** for question detection and **Gemma** for classification.
- **FreeTube**: Built a Puppeteer-based YouTube browser supporting ad-free playback through browser automation.
- **Rummy Bot**: Built a reinforcement-learning agent to play rummy and assist players preparing for competitive tournaments.
- **Poker Assistance Bot**: Built a real-time poker coach using ChatGPT vision and chat APIs to teach gameplay and guide player learning.

EDUCATION

Indian Institute of Technology (BHU), Varanasi Jul 2013 - May 2017
Bachelor of Technology (B.Tech) | Computer Science
