makedataeasy

Dear Prisma Hiring Team,

I am writing to express my interest in engineering opportunities at Prisma. I bring 10 years of software engineering experience across Go, distributed systems, cloud infrastructure and developer tooling, including experience as a co-founder and CTO.

At Customer.io, I maintain messaging services handling billions of daily API requests and build testing and developer tools. Previously, at Cloudfeather Games, I built Kubernetes infrastructure for millions of users, reduced infrastructure costs by $500K annually and led five engineers. At Grab, I built a Go/Kafka settlement pipeline that processed over 100,000 settlements in 15 minutes during its first production run.

Prisma appeals to me because of its focus on making database development easier and building open-source products that developers rely on. I have contributed fixes to projects including Bitcask, NutsDB and Sentry JavaScript, addressing issues such as deadlocks, garbage collection and memory leaks. I enjoy understanding how systems behave and turning that understanding into practical improvements for other engineers.

At Prisma, I would like to work on reliable backend services, database tooling and developer experience, while deepening my expertise in distributed systems. I would bring hands-on technical ownership, experience working across teams and a willingness to learn your TypeScript stack. Building a company has also taught me to adapt quickly, listen to feedback and balance engineering decisions with product needs.

I am planning to relocate to Paris, where my wife has accepted a role, which would place me within your stated hiring timezone range. I would welcome consideration for an engineering role that matches my experience.

Thank you for your consideration.

Regards,
Yash Suresh Chandra
