Dear Upsun Hiring Team,

I am applying for the Senior Software Engineer role focused on billing. I bring 10 years of software engineering experience across Go, distributed systems, payments and cloud infrastructure.

At Grab, I built a Go/Kafka settlement pipeline supporting instant payouts for over 1,000 merchants and processing more than 100,000 settlements in 15 minutes during its first production run. As co-founder and CTO of Cloudfeather Games, I integrated over 10 gaming platforms for authentication, payments and settlements, built services handling over 100,000 monthly transactions, and led five engineers.

At Customer.io, I maintain messaging services handling billions of daily API requests. This work has strengthened my experience in operating reliable services, troubleshooting production issues and improving testing and observability.

Upsun’s focus on simplifying infrastructure for developers appeals to me. I would welcome the opportunity to bring my Go and financial systems experience to your billing services while contributing as a hands-on engineer and mentor.

Thank you for your consideration.

Regards,
Yash Suresh Chandra
